

Magistrada range:
magisterial and magnificent

The power of ceramic.
The world of Wienerberger.

Magistrada range: magisterial and magnificent

Facing bricks with its own magisterial signature. Magnificent in look.

We are proud of our new range of facing bricks for both high-end residential buildings and commercial use. A representative range: modern with character, beauty without frills. They come from Bemmels, where we still use the unique intermittent kiln.

Authentically characteristic

The pure waterstruck design, powerful colours and lively white spots give the Magistrada range its powerful look.

The authentic character is shaped by the raw edges, the sintering of coal and the light deformations. The Magistrada range is extended with four (light) shades of grey. Available in three sizes: 400x100x40 mm, 210x100x50 mm and 210x100x40 mm.

You will find extensive information online on www.magistrada.nl.

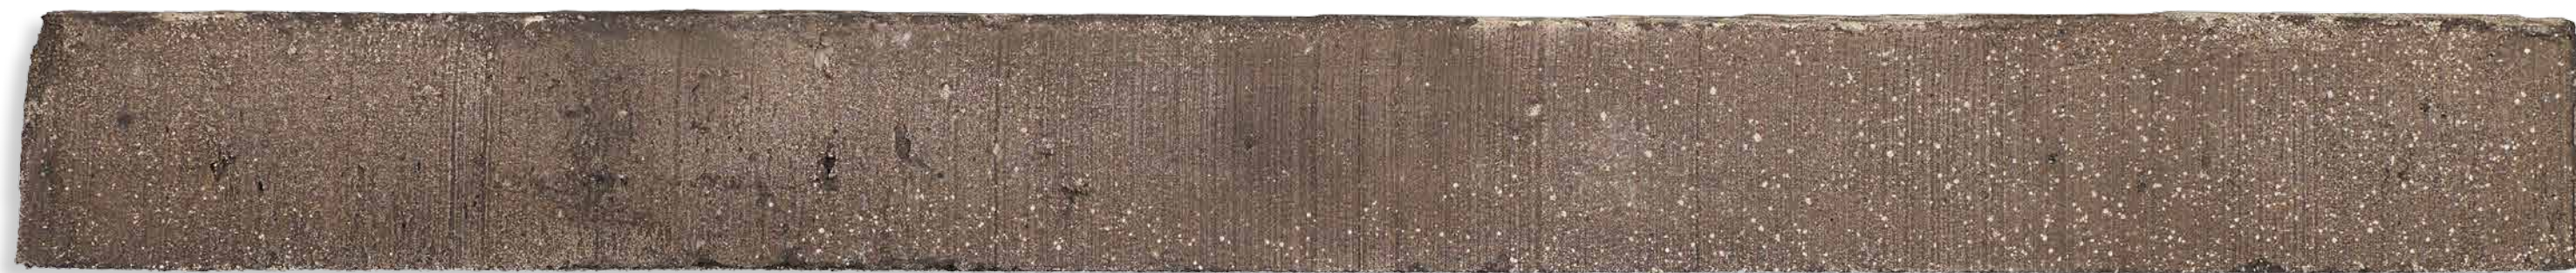

Here you can also request samples.

Clear and powerful

Distinctive bricks with the typical features that are created in an intermittent kiln. A unique furnace for the knows high Wienerberger quality.

Clear and powerful

The Magistrada colours are clear and powerful. With a rich, multi-colour and subtle nuances. The

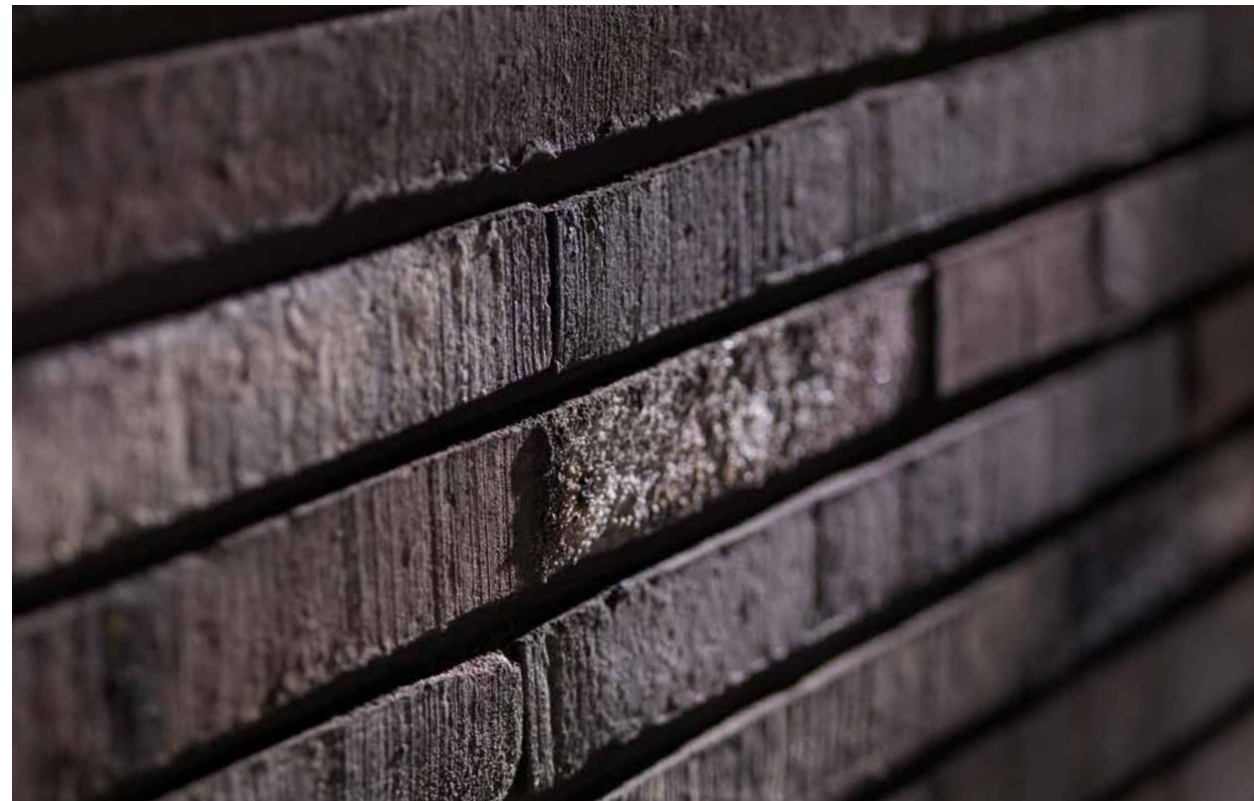

sintering of coal reveals character and results in the partly 'retracted' bricks.

Balance

The framing is raw, the texture is slightly striped. White spots give it a lively, modern balance. Magistrada has entered the market in 3 sizes: 400x100x40 mm, 210x100x50 mm and 210x100x40 mm. For high-end unattached houses, luxury apartment complexes and quality commercial use.

Unique texture

Waterstruck is a typical method, to creating a specific structure of the brick. Instead of using sand, water is sprayed into the moulds. This ensures a smooth, somewhat planed and non-sanded texture. The natural colour of the clay mix remains visible and the brick obtains a soft, subtle tint.

Focus on a uniquely aesthetic look of brick facing

Line play

The natural lining of the long size can be extra reinforced by means of a narrow and deepened joint. For example, by means of thin-bed masonry in the brickwork: the facing bricks are laid without butt joints. This long style of brickwork can also be realised in WF by laying without head joints and by joining narrowly and somewhat deeper.

Focus on processing

Magistrada facing bricks are in principle multi-sided. This merits a comment: around 10 tot 15% of these bricks contain sintering and spots, but not on both sides. Take this into account in terms of the desired look of the facing.

For an optimal facing look, we recommend laying the long-size bricks using a thin bed. The narrow joint requires a keen eye. Take into account the size deviations and the curvatures in these bricks. Traditional brickwork ensures that these deviations can be solved.

Advice for working with the Waal- and Vechtformat

With these sizes, you are of course working more with mortar patterns than just irregular bonds. Therefore with regard to the design, we always advice you to take into account any possible divergence in dimensions. Curvatures and deformations are common in the Magistrada range.

You will find more information, technical specifications and guidelines for laying on www.magistrada.nl.

Advice for working with the long sizes

Rapid brickwork with long sizes; simply nestling them without setting the butt joint.

A taut and deepened joint is achieved by finishing with a pointmaster.

Deepened joint by placing thin-bed mortar on the backside of the brick.

Bricklaying using irregular bonds makes it easier. Edge joints absorb the curved bricks.

Facing bricks

Wienerberger Bemm

Whatever originates from Wienerberger Bemm is pure

In the flood plains of Bemm, you will find this brilliant factory. Based on a unique process, it produces reverberatory furnace bricks from river clay that is thousands of years old.

Coal-burning, in which coal is literally thrown into the fire, guarantees the sintering and slight deformation. A unique type of burning in a modern production environment.

The reverberatory furnace has 24 chambers. The fire moves from chamber to chamber. The flashing-over burning process guarantees a high-quality, authentic ceramic product.

**WE ARE PROUD OF OUR UNIQUE FACTORY IN BEMMEL
WITH ITS REVERBERATORY FURNACE**

Facing bricks
Wienerberger Bemm

Whatever originates from Wienerberger Bemm, is unique

In addition to a standard press, Wienerberger Bemm has a special press for very individualistic shapes and sizes. If necessary, the mixture for unique

combinations is done by hand. The Magistrada long sizes are also produced in these special presses.

OUR CRAFTSMEN EXPERIMENT WITH THE LIMITS FOR AN AUTHENTIC LOOK WITH ITS OWN COLOUR SUBTLTIES AND DEVIATING TEXTURES AND SIZES.
